

New unique designs:

# Come and take a peek

This year our very special new exhibition stand on PLMA is surpassed only by seven revolutionary new packagings

Being a leading manufacturer of private-label detergents, cleaning products and products for personal care obligates us to constantly develop new products, services and production methods.

But being Danish means that we have always been very much into design, and we have felt a strong obligation to strive for unique packaging that are just as revolutionary as our environmental attitude is towards production. This year we are therefore very proud to introduce a collection of brand new packaging developed by leading danish designers.

It is different, it is unique and it will help your products stand out and grab attention in a way that makes you think that a genie were involved. And looking at the packing, we cannot help but think that maybe there was . But come and take a look for yourself: The seven wonders of Danish packaging are waiting to see you.

Nopa Nordic is the preferred partner when it comes to product development, professional feedback, sustainable production, and competitiveness.
